Pvt. Paul A Thomas
Camp Pickett
Virginia

Dear Mr. Thomas:

Thank you very much for your letter of November 24th verifying reception of WHEB's signals away out there in Camp Pickett, Virginia.

It is very nice to receive the many reports from all your brother DX'ers all over the United States. I am very sorry that good reception wasn't to be had at all times, due to WSB warming up their 50,000 watter in Atlanta. If I had known that WSB started to warm-up their transmitter that early, I'd have scheduled this program for 4:15 AM.

The print to right of this letter-head is an exact reproduction of a photograph of our transmitter building, so you can get a general idea of what the transmitter building looks like.

The building is of all steel construction. It is made up of 6" steel panels which are welded together and all the air space being packed with tiny flakes of mica, making the building both sound proof and weather proof. That is, changes of outside weather does not change inside conditions.

Thanking you once again, I am

Very truly yours,
Antonio Vaccaro
